

Images: Cropping – online tool

1 Go to: <https://www.img2go.com/crop-image>

2 Click on "Choose File" – or drag the image into the blue field.

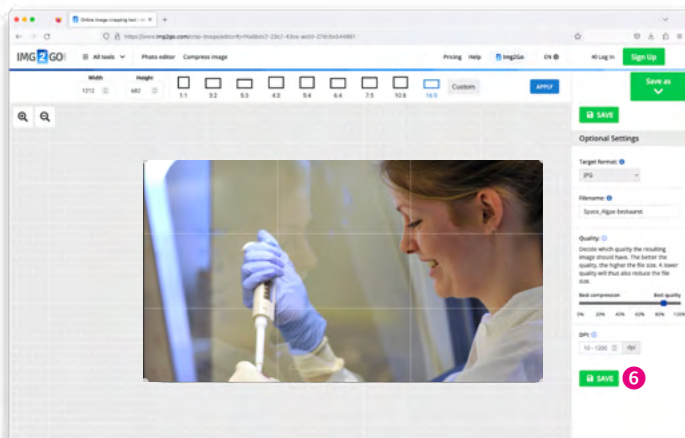

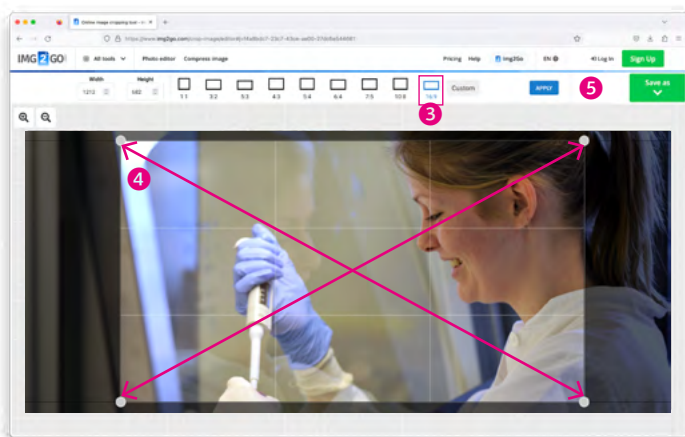

3 Click on the desired aspect ratio.

4 Drag the white circles until you have found the right crop.

Feel free to crop close to the subject, and use the white grid as a guide to the "golden ratio" = good visual harmony. Our eyes are naturally drawn to where the white lines intersect, so central elements in the image can be placed there.

5 Click the **APPLY** button and then **SAVE AS**.

Optional Settings

Target format: ⓘ

JPG

Filename: ⓘ

bio64_title-no-spaces

Quality: ⓘ

Decide which quality the resulting image should have. The better the quality, the higher the file size. A lower quality will thus also reduce the file size.

DPI: ⓘ

10 - 1200 dpi

SAVE 6

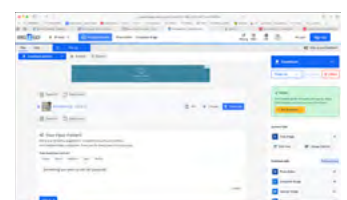

Target format:

- Photos and illustrations with many colors: Choose JPG.
- Flat graphics with uniform color areas: Choose PNG.

Filename

- Optionally, give the image a different title. Note: No special characters or spaces!

6 Click the **SAVE** button.

7 You can now download your cropped image.
